

Audit Passport Summary

Readiness score: 64/100

Audit Passport reviewed 6 evidence-backed findings. 5 findings are Critical or High priority and should be addressed before regulatory sign-off. A new-evidence ripple has updated the report.

Top Audit Passports

F-005 | Critical | Risk 98 | Contradictory numbers

Affected: plant_id: A

Why it matters: The same auditable entity carries conflicting numeric values, which can undermine inspection, shipment, or regulatory calculations.

Action: Escalate. The finding affects high-risk audit evidence and needs supervisor review before sign-off.

Evidence: track01_data_rescue.csv row 3, quantity=592

Evidence: track01_data_rescue.csv row 4, quantity=826

Evidence: track01_data_rescue.csv row 7, quantity=4137

F-002 | Critical | Risk 95 | Impossible dates

Affected: plant_id: A

Why it matters: A shipment is recorded before the item was produced, which breaks audit chronology and evidence sign-off.

Action: Escalate. The finding affects high-risk audit evidence and needs supervisor review before sign-off.

Evidence: track01_data_rescue.csv row 48, ship_date=2024-10-29

Evidence: track01_data_rescue.csv row 465, ship_date=2025-12-29

Evidence: track01_data_rescue.csv row 1405, ship_date=2025-12-09

F-003 | Critical | Risk 90 | Impossible values

Affected: plant_id: A

Why it matters: A manufacturing record has a non-positive quantity, which cannot be accepted without correction or explicit voiding evidence.

Action: Escalate. The finding affects high-risk audit evidence and needs supervisor review before sign-off.

Evidence: track01_data_rescue.csv row 939, quantity=-445

Evidence: track01_data_rescue.csv row 2563, quantity=-164

Evidence: track01_data_rescue.csv row 3823, quantity=-32

F-001 | High | Risk 83 | Orphaned reference

Affected: plant_id: A

Why it matters: A production record points to a customer that is missing from the customer master, leaving the audit evidence chain incomplete.

Action: Suggested Fix. Evidence is strong enough for a recommended correction, but a human should confirm it.

Evidence: track01_data_rescue.csv row 3, customer_id=CX-A228

Evidence: track01_data_rescue.csv row 51, customer_id=CX-G153

Evidence: track01_data_rescue.csv row 87, customer_id=CX-E185

F-004 | High | Risk 71 | Unit conflict

Affected: track01_data_rescue

Why it matters: Quantity values are labeled with a dimensional unit. A compliance user must confirm whether quantity means count, length, or another measurement before using it in audit calculations.

Action: Suggested Fix. Normalize units using the new source metadata, then keep only unresolved records in manual review.

Evidence: track01_data_rescue.csv row 2, unit=mm

Evidence: track01_data_rescue.csv row 3, unit=mm

Evidence: track01_data_rescue.csv row 4, unit=mm

Ripple update: MP-001 changed risk 92 -> 71 and action Manual Review Required -> Suggested Fix.

F-006 | Medium | Risk 64 | Duplicate records

Affected: track01_data_rescue

Why it matters: The same source table contains repeated business records. A duplicate can make an audit sample appear larger or

cleaner than it is.

Action: Safe Auto-Fix. Duplicate rows can be quarantined or de-duplicated with a reversible audit log.

Evidence: track01_data_rescue.csv row 26, record_id=R-00025

Evidence: track01_data_rescue.csv row 40, record_id=R-00039

Evidence: track01_data_rescue.csv row 46, record_id=R-00045

Updated After New Evidence

MP-001: Supplier manifest measurement units should be interpreted before raw numeric values are treated as contradictions.

Reason: New source metadata found by the remediation agent confirms that one source reports grams while another reports milligrams.

Affected findings: F-004

Sign-off Note

This report is generated from semantic memory cards, evidence pointers, and agent handoffs. Manual review remains required for unresolved audit blockers.
